Library
DATABASES

What is a database?

A database is an electronic collection containing information. A library database can include text articles, abstracts, books, videos, music, citations, and book chapters. Think of a database as a fact-checked, more organized internet.

Databases are your best bet for research or school assignments.

How do you access a database?

- Visit library.glendaleaz.gov and click on the Library Databases link (found under Books, Media & Research in the menu at the top of the site)
- On the Library Databases page, you may browse databases alphabetically or by category.
- When prompted, type in your library barcode number and password (usually the last four digits of your telephone number).
- Click on Log In. You will return to a list of databases.
- Click on the link for the database you wish to access.

Your library account must be up to date and free of any serious charges to use the library databases.

If you need assistance, email the library at elibrarian@glendaleaz.com
